DETAILED ACTION

1. This office acknowledges receipt of the following items from the Applicant:

Papers submitted under 35 U.S.C. 119(a)-(d) have been placed of record in the file.

Information Disclosure Statement (IDS) filed on 10/1/03 was considered.
2. Claims 1-5 are presented for examination.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Frankowsky et al, Pat. No. 6608783.

With regard to claim Frankowsky discloses a memory circuit, comprising: a memory cell array (fig. 4, 10) including a plurality of memory cells (fig. 4, M1-M8), said memory cell array including a plurality of word lines (fig. 4, WL0-WL7) and a plurality of bit lines (fig. 4, BL0-BL7) for addressing said plurality of memory cells (col. 4, line 5-15); a plurality of write amplifiers (fig. 4, SA0-SA3) for writing to the plurality of memory cells, each one of the plurality of writ amplifiers assigned to a group of said plurality of bit lines (fig. 4, BL0-BL7) (col. 4, line 10-15); an address decoding circuit (fig. 4, 12) for

simultaneously activating a group of said plurality of write amplifiers, depending on a test mode signal (fig. 4, TEST MODE), so that said group of said plurality of write amplifiers writes a test datum to a group of said plurality of memory cells via respectively assigned ones of said plurality of bit lines (col. 4, line 62-col. 5, line 18).

With regard to claim 2, Frankowsky discloses further a plurality of switching devices (fig. 4, 17); each one of the plurality of write amplifiers connected to assigned ones of said plurality of bit lines via a respective one of said plurality of switching devices (fig. 4, DI0-DI3) in order to write the test datum from an activated one of said plurality of write amplifiers to an addressed memory cell via one of said plurality of bit lines addressed by a write address (col. 4, line 50-61).

With regard to claim 3, Frankowsky discloses wherein said address decoding circuit (fig. 4, 12) is configured to simultaneously connect one of said plurality of write amplifiers to assigned ones of said plurality of bit lines depending on the test mode signal (fig. 4, TEST MODE) (col. 4, line 62-col. 5, line 18).

Drafted as Method claim

4. As per claim 4-5 encompass the same scope of invention as to that of claim 1-3 except they are draft in method format instead of apparatus format. The claims are therefore rejected for the same reason as set forth above.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicants= disclosure. Kanda et al (6813696), Shinozaki (6404663), Hayashi et al (6317372) and Furutani et al (5636163) disclose a memory device having amplifier circuits.
6. When responding to the office action, Applicants= are advised to provide the examiner with the line numbers and page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.
7. A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) day from the date of this letter. Failure to respond within the period for response will cause the application to become abandoned (see MPEP 710.02 (b)).
